

Full Stack Web Developer

Experience 3+ years

Description

At Sukshi, we never stop searching for innovative ways to put our state of the art Machine Learning algorithms into action, while creating useful technologies. Come be a part of the exciting journey with us, towards becoming India's leading Artificial Intelligence platform. Currently our technology is being used at a massive scale all over India at the rate of 200 TPS in production.

As a Full Stack Web Developer you will utilize front end frameworks/languages like Angular, JavaScript, HTML, CSS etc to create and develop effective user interfaces for our organization. You will also create robust backend solutions using web APIs and make use of SQL and NoSQL databases. You will work closely with our Engineering team to integrate solutions across the software stacks.

How to Apply:

Please complete the MANDATORY TECHNICAL TASK given at : <https://bit.ly/3fOWJj1>

Responsibilities

- Creating and integrating intuitive user experiences into our frontend applications
- Developing/enhancing solutions that solve business needs
- Participating in refining our reference architecture framework in order to create user applications that grow and scale with the needs of the company
- Generating proactive monitoring and usage metrics that establish system baselines to be able to predict future demands
- Monitoring website performance, watching for traffic drops related to site usability problems, and rectifying the issues
- Reviewing and understanding the software roadmap to be able plan future website upgrades with the development team
- Drive continuous integration and improvements
- Optimization of the application for maximum speed and scalability

Requirements

- 3+ years of experience with web development
- Knowledge or experience with JavaScript, Angular and/or ReactJS, HTML5, JQuery, AJAX, and CSS.
- Knowledge or experience with SQL and NoSQL databases(MySQL, Postgres, MongoDB).
- Knowledge or experience developing restful web services using NodeJS and/or other web frameworks.
- Knowledge or experience in designing and developing mobile compatible web user interfaces.
- Knowledge of Web coding standards, security standards and multi-browser compatibilities.
- Experience with different web frameworks like Django, Flask, gin-gonic etc.
- Experience with industry leading CI/CD practices and build configuration management.
- Strong experience in API development & integration, Database Design, third party libraries.
- Knowledge or experience in Performance tuning, optimization techniques, quality standards, industry best practices.

Skills

We Offer

- Competitive salary
- Casual dress code & work culture
- Dynamic teams and creative work environments
- Interact with several Silicon Valley Entrepreneurs
- Work closely with several best engineer and business folks of the country
- Extensive in-house educational opportunities

About US

Real Human Connection is the need of the hour in the digitization-dominated world of today and this need continues to grow exponentially, as our dependence on digital devices increases. Sukshi is aimed at facilitating human connection by including emotional intelligence into existing digital communication channels. Sukshi develops a versatile platform suitable for interpreting and expressing human emotions in text, audio, and visual communication.
